#### 1 INTRODUCTION

### 1.1 Overview

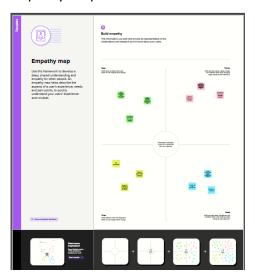

Vehicle management system is an automated software for the transportation industry or an organization which owns a large number of vehicle & managing fleets. It is an organized code which provides management functions that permit corporations to get rid of or minimize the risks related to vehicles.

### 1.2 Purpose

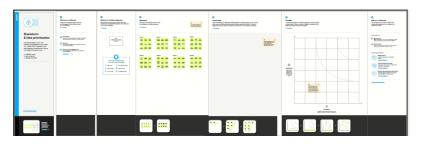

Vehicle Management is an application where a customer Details are stored in order to choose cars, bikes and commercial vehicles for travel within the city. The data which is stored here is further used to remind them if any offers are provided during the seasons and any updates regarding vehicles are sent to them in the form of messages and mails.

### 3.2 Activity and Screenshot

### **ACTIVITY -1 OBJECT CREATION:**

Creation of Objects for Vehicle Management. For this Vehicle Management we need to create 2 objects i.e., Vehicles, Driver.

### **VEHICLE:**

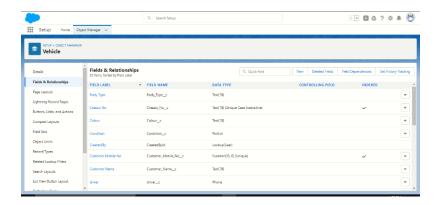

### **DRIVER:**

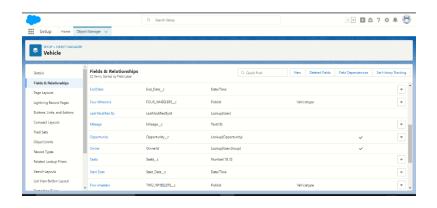

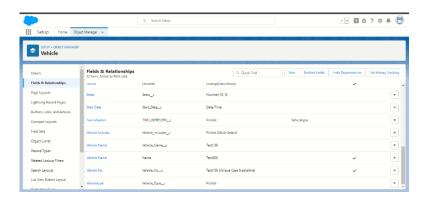

### **ACTIVITY - 2: FIELDS AND RELATIONSHIPS:**

### FIELDS & RELATIONS FOR VEHICLE:

Fields in Vehicles objects are following below data types:

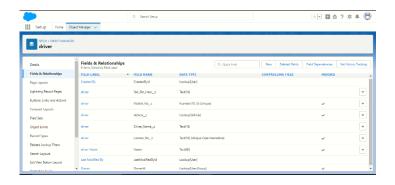

### FIELD AND RELATIONSHIPS FOR DRIVER:

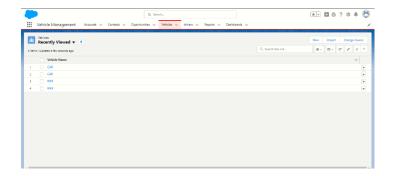

Fields in Driver objects are following below data types:

### **ACTIVITY 3 – LIGHTNING APP:**

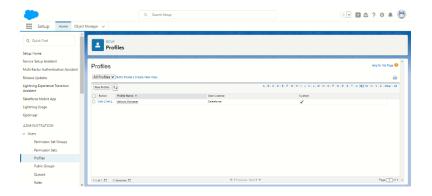

We have created the Vehicle Management Construction app.

### **ACTIVITY 4 – PROFILE**

**Creating a Profiles:** We have created a Vehicle Manager profile and set its Object permissions.

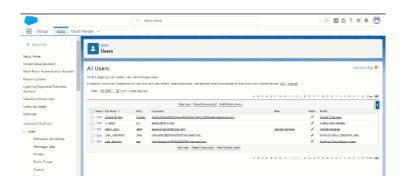

### **Creating a Profiles:**

### **ACTIVITY 5 – USERS:**

A user is **anyone who logs in to Salesforce**. Users are employees at your company, such as sales reps, managers, and IT specialists, who need access to the company's records. Every user in Salesforce has a user account.

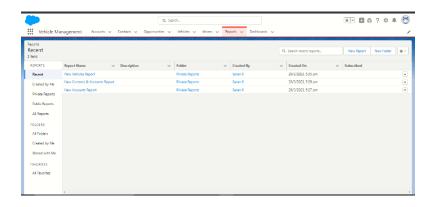

## **Creating a Users:**

### **ACTIVITY 6 – REPORTS:**

A report is a list of records that meet the criteria you define. It's displayed in Salesforce in rows and columns, and can be filtered, grouped, or displayed in a graphical chart. Every report is stored in a folder. Folders can be public, hidden, or shared, and can be set to read-only or read/write.

### **Reports And Dashboards:**

#### 4 ADVANTAGES:

A vehicle management system keeps the record of every important function and daily activities such as vehicle type, vehicle fitness, document validity date, insurance policy, etc.

It also keeps the record of driver and helper details to monitories and improves their productivity.

Beside trip and vehicle operation records also be recorded by it.

To keep your company lifetime, detail a vehicle management system provides you the best opportunity.

#### 5 DISADVANTAGES:

It is difficult to manage and maintain Vehicle management system due to use of multiple technologies such as cloud servers, cellular wireless systems, fleet management software etc.

It requires skilled resources to maintain such system. This increases maintenance costs.

#### **6 APPLICATIONS:**

The Vehicle Management System (VMS) is an application for the Automotive industry. It supports, in the area of Sales & Services, the business processes that you require as vehicle importer when dealing with your original equipment manufacturers (OEMs) and your dealers in new and used vehicle sales.

#### 7 CONCLUSION:

Vehicle management system using Salesforce help us to keep in contact with our customers. Vehicle management system maintains customer relationship management. This software is useful for both companies and customers.

#### **8 FUTURESCOPE:**

This software maintains all the customers details which will help the companies to contact the customers. This application makes the customer to feel secure.
